

Cloud Computing Basics

Multiple-Choice Quiz

20 Questions • Answer key on the last page

Name: _____ Date: _____ Score: _____ / 20

1. What is cloud computing?

- A) Storing data only on local hard drives
- B) Delivery of computing services over the internet
- C) A type of weather forecasting software
- D) A programming language for servers

2. Which of the following is NOT a core cloud service model?

- A) IaaS (Infrastructure as a Service)
- B) PaaS (Platform as a Service)
- C) SaaS (Software as a Service)
- D) DaaS (Driving as a Service)

3. In which service model does the provider manage everything and the user simply uses the software?

- A) IaaS
- B) PaaS
- C) SaaS
- D) On-premises

4. Which cloud deployment model is open for use by the general public?

- A) Private cloud
- B) Public cloud
- C) Hybrid cloud
- D) Community cloud

5. What is a 'hybrid cloud'?

- A) A cloud used only for testing
- B) A combination of public and private clouds working together
- C) A cloud with no internet access
- D) A free version of a public cloud

6. Which company offers Amazon Web Services (AWS)?

- A) Microsoft
- B) Google
- C) Amazon
- D) IBM

7. Which of these is Microsoft's cloud platform?

- A) Azure

- B) GCP
- C) Oracle Cloud
- D) DigitalOcean

8. What does 'scalability' mean in cloud computing?

- A) Reducing the number of users
- B) The ability to increase or decrease resources as needed
- C) Permanently fixing resource limits
- D) Deleting unused files automatically

9. What is virtualization?

- A) Creating a physical copy of a server
- B) Creating virtual versions of resources like servers or storage
- C) Deleting virtual machines
- D) Encrypting network traffic

10. Which billing model is most associated with cloud computing?

- A) One-time lifetime payment
- B) Pay-as-you-go (pay for what you use)
- C) Annual fixed fee only
- D) No payment ever required

11. What does 'elasticity' refer to in the cloud?

- A) Stretching physical cables
- B) Automatically adjusting resources to match workload in real time
- C) Bending server racks
- D) A type of data encryption

12. Which of the following is a key benefit of cloud computing?

- A) Higher upfront hardware costs
- B) Reduced need for maintaining physical infrastructure
- C) Slower deployment of applications
- D) Limited access from remote locations

13. What is 'multi-tenancy' in cloud computing?

- A) One customer using many data centers
- B) Multiple customers sharing the same infrastructure securely
- C) A single tenant per physical server
- D) Renting apartments online

14. Which service model provides a platform for developers to build and deploy applications without managing infrastructure?

- A) IaaS
- B) PaaS
- C) SaaS
- D) DBaaS

15. What is a data center?

- A) A single personal computer
- B) A facility that houses computer systems and storage
- C) A mobile app for data entry
- D) A type of database language

16. Which of the following is an example of SaaS?

- A) Renting a bare virtual server
- B) Google Docs / Microsoft 365
- C) A blank operating system image
- D) Raw network bandwidth

17. What does the term 'on-demand self-service' mean?

- A) Users must call support to get resources
- B) Users can provision resources automatically without human intervention
- C) Resources are only available once a year
- D) Only administrators can request resources

18. Which is a common concern when adopting cloud computing?

- A) Too little storage capacity globally
- B) Data security and privacy
- C) Inability to access the internet anywhere
- D) Lack of any service providers

19. What is 'Google Cloud Platform' commonly abbreviated as?

- A) GCP
- B) GPC
- C) CGP
- D) GPS

20. Which deployment model is dedicated to a single organization for greater control and security?

- A) Public cloud
- B) Private cloud
- C) Shared cloud
- D) Open cloud

Answer Key

1. **B)** Delivery of computing services over the internet — Cloud computing delivers computing services (servers, storage, databases, software) over the internet.
2. **D)** DaaS (Driving as a Service) — The three standard service models are IaaS, PaaS, and SaaS.
3. **C)** SaaS — In SaaS, the provider manages the full stack and users just access the application (e.g., Gmail, Salesforce).
4. **B)** Public cloud — A public cloud is owned by a provider and shared among many customers over the internet.
5. **B)** A combination of public and private clouds working together — Hybrid cloud combines private and public clouds, allowing data and apps to move between them.
6. **C)** Amazon — AWS is the cloud platform offered by Amazon.
7. **A)** Azure — Microsoft Azure is Microsoft's cloud computing platform.
8. **B)** The ability to increase or decrease resources as needed — Scalability is the ability to adjust computing resources up or down based on demand.
9. **B)** Creating virtual versions of resources like servers or storage — Virtualization creates virtual (software-based) versions of hardware resources, a foundation of cloud computing.
10. **B)** Pay-as-you-go (pay for what you use) — Cloud services typically use a pay-as-you-go model, charging based on actual usage.
11. **B)** Automatically adjusting resources to match workload in real time — Elasticity is the automatic scaling of resources up or down to match current demand.
12. **B)** Reduced need for maintaining physical infrastructure — Cloud computing reduces the need to buy and maintain physical hardware.
13. **B)** Multiple customers sharing the same infrastructure securely — Multi-tenancy lets multiple customers share the same physical resources while keeping their data isolated.
14. **B)** PaaS — PaaS provides a development and deployment platform without managing the underlying infrastructure.
15. **B)** A facility that houses computer systems and storage — A data center is a physical facility housing the servers, storage, and networking that power cloud services.
16. **B)** Google Docs / Microsoft 365 — Google Docs and Microsoft 365 are ready-to-use software delivered over the internet (SaaS).
17. **B)** Users can provision resources automatically without human intervention — On-demand self-service lets users provision computing resources automatically as needed.
18. **B)** Data security and privacy — Data security and privacy are among the top concerns organizations consider when moving to the cloud.
19. **A)** GCP — Google Cloud Platform is commonly abbreviated GCP.
20. **B)** Private cloud — A private cloud is dedicated to one organization, offering more control and security.
